Data: 13–17 April 2026

Executive Summary

Week 1: 13–17 April 2026

Structural reset across three live campaigns; early signal positive on Brand and PMax.

£8,462	87	101	£97
Week 1 spend	Dengro Offline Leads	Primary conversions	Cost per lead

Brand: CPC at 8-week low

PMax: CPA improving

DII: Learning phase (rebuild)

Core Insight

Week 1 was structural. Three live campaigns moved off Max Conversion Value bidding onto controllable targets. Around 5,000 structured negatives replaced 2,192 unstructured broad-match entries, and the Dental Implants Intent campaign was rebuilt from 4 legacy ad groups into 25 intent-grouped ad groups. Early signal is positive — Brand CPC is at its 8-week low and PMax CPA improved week-on-week — but DII needs a further week of stabilisation and Monday's end-to-end tracking audit is the gate to any CPA-based decisions from here.

Work Delivered

Tue 14 → Fri 17 April (4 working days post-signing)

Tue 14 Apr — 1

Negatives Overhaul

2,192 unstructured negatives → ~4,000+ structured across 11 shared lists (grew to ~5,000 by Fri). ~£63k of 60-day waste blocked at auction source.

Wed 15 Apr — 2

Account-Wide Reset

Brand rebuilt (tIS 90% / £1.50 CPC cap). Auto-apply disabled. PMax → Target CPA £60. DII → Target CPA £75. 270-postcode geo + 42-cell schedule rolled to all 3 campaigns. 10 new RSAs.

Thu 16 Apr — 3

DII Rebuild (Part 1)

20 new ad groups built on Dental Implants Intent. 537 keywords, 60 RSAs. 4 legacy ad groups paused. Website USP audit. 18 questions sent to Giulio + Tommaso.

Fri 17 Apr — 4

Audit + Completion

173 DBD-blocking negatives removed (zirconia, same-day teeth, Hammersmith, crowns). AG21-25 built — DII now 25/25 complete. Ad Strength audit across 63 RSAs. Client replies received.

Key Finding

Three campaigns moved from Max Conversion Value bidding (optimising toward the arbitrary £300 booking value) onto Target CPA / Target Impression Share — putting real cost control in place for the first time.

Brand Campaign

Week 1: 13–17 April 2026

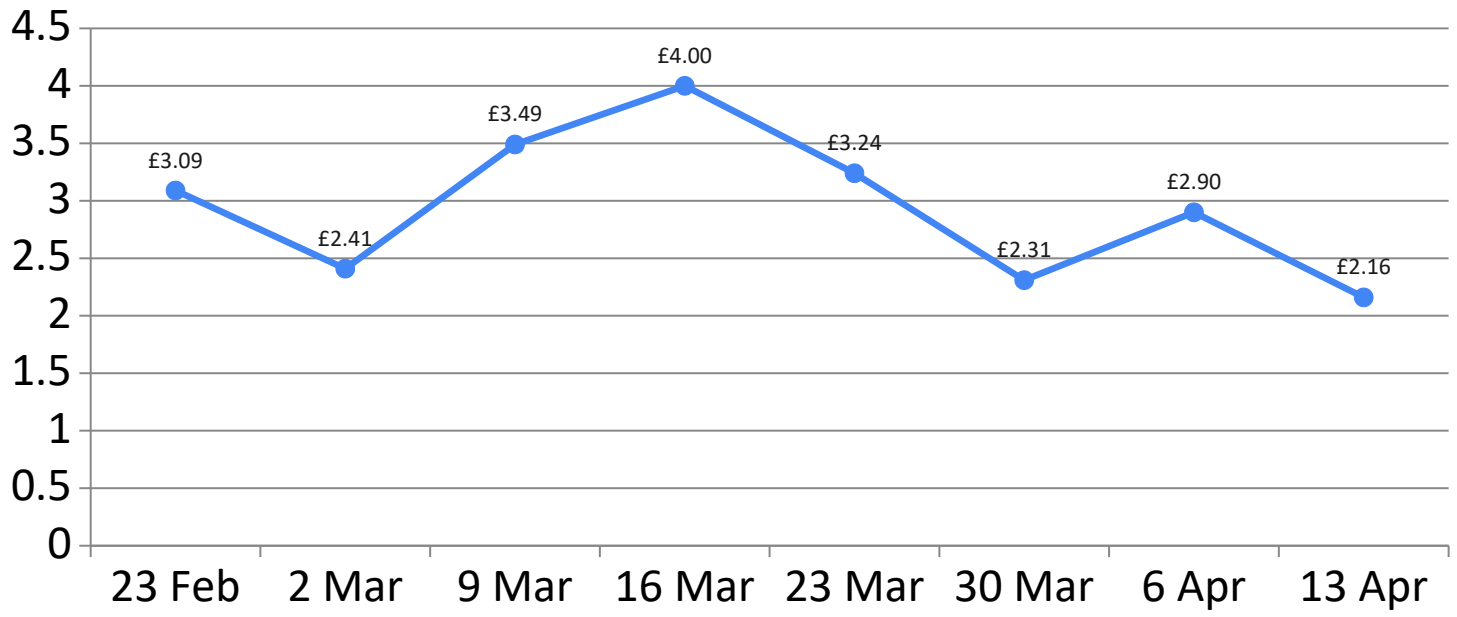
Bid strategy rebuilt Wednesday 15 April — Target Impression Share 90% / Max CPC £1.50.

£280
Week spend

12
Primary conv.

£23.39
Cost / conv.

£2.16
Avg CPC
Lowest of 8 weeks



Key Finding

Brand CPC is at its lowest of 8 tracked weeks. The £1.50 Max CPC cap is biting without suppressing volume — impression share held at 92%+ and conversion volume tracked with spend.

Recommendation

Hold the £1.50 cap through Week 2. Evaluate lowering toward £1.20 once the 14-day bid-strategy learning phase completes.

Performance Max

Week 1: 13–17 April 2026

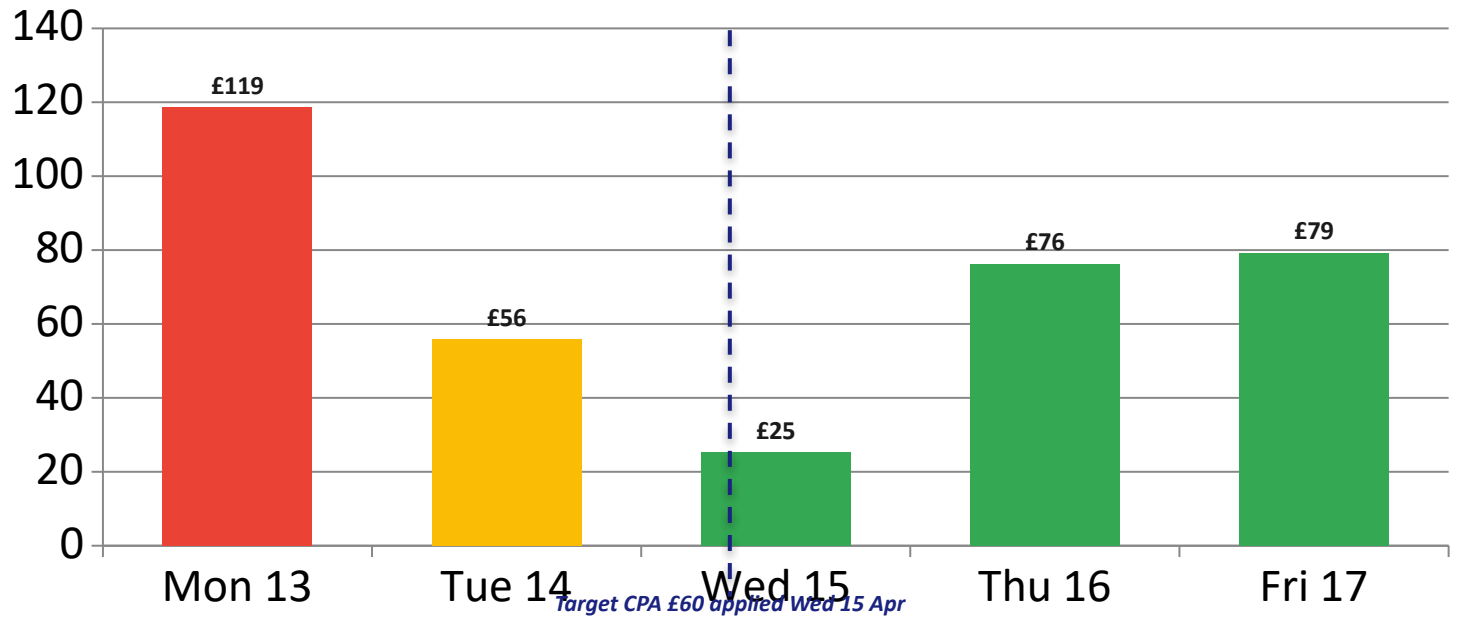
Bid strategy switched Wed 15 April — Max Conversion Value (tROAS) → Target CPA £60.

£5,960
Week spend

81.5
Primary conv.

£73.13
Cost / conv.
Down from £85.86

£3.22
Avg CPC



Key Finding

CPA improved week-on-week despite the mid-week bid-strategy switch and a persistent "asset groups limited by policy" flag restricting reach. Wednesday's £25 CPA shows the ceiling potential once policy constraints are cleared.

Flagged for Week 2

Rebuild PMax asset groups with policy-safe copy aligned to Giulio's verified claims (no "99.12%", no "Save 60%", no "Top 10 Europe"). Scheduled Wed 22 April.

Dental Implants Intent

Week 1: 13–17 April 2026

Campaign fully rebuilt Thu–Fri. Entered learning phase Wed PM; meaningful signal needs 5–7 days.

£2,222	25	~675	75
Week spend	Ad groups (was 4)	Keywords (was 27)	RSAs (was 6)

Structural rebuild — before → after

Ad groups	4	→	25
Keywords	27	→	~675
RSAs	6	→	75

Key Finding

The campaign entered learning Wed PM after a full structural rebuild. The five days of data (2.5 on the new structure) show a high nominal CPA — expected noise, not signal. All 27 legacy keywords are covered by the new 25-ad-group structure.

Recommendation

Hold the new structure untouched through Wed 22 April. Ad Strength audit on AG22-25 resumes Tuesday once Google clears the new ads from Pending review.

The Numbers That Matter

Business-level outcomes — Week 1

Full end-to-end tracking audit scheduled Mon 20 April — the gate to all CPA-based decisions.

£8,462	2,339	87	[awaiting audit]	7
Spend	Clicks	Dengro Leads	Bookings	Purchases

Dengro Offline Booking fired 0 times in this week's conversion export. Monday's tracking audit will confirm whether this is a reporting gap or a genuine zero-booking week. No CPA-based decisions will be drawn before the audit closes.

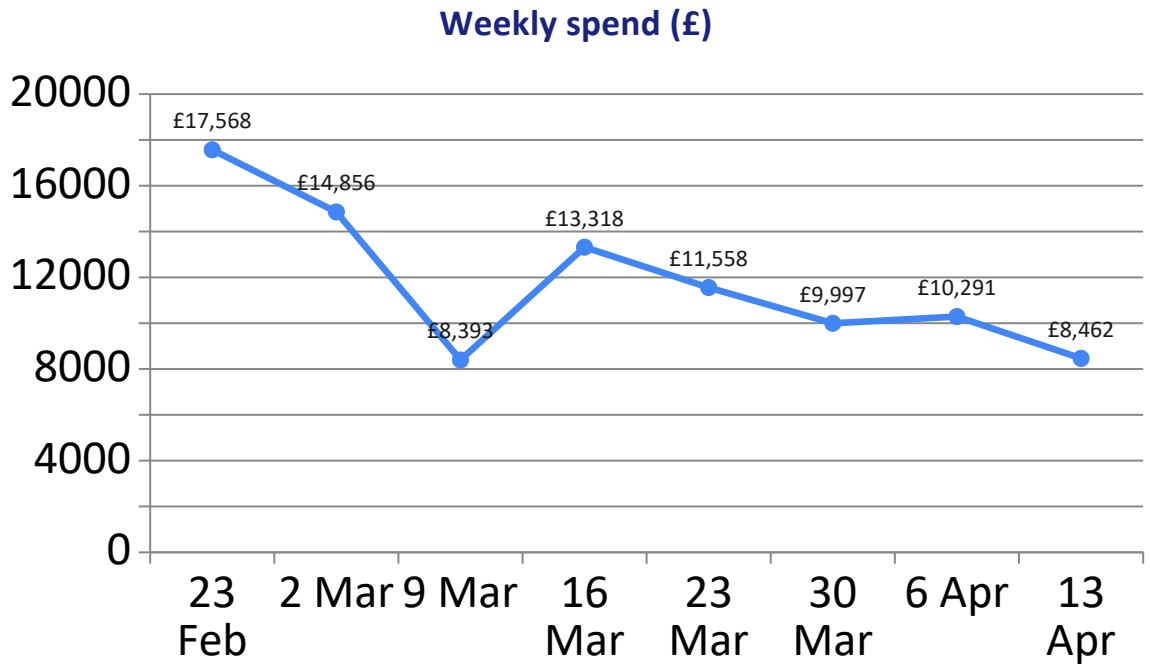
Dengro Offline Leads — by campaign

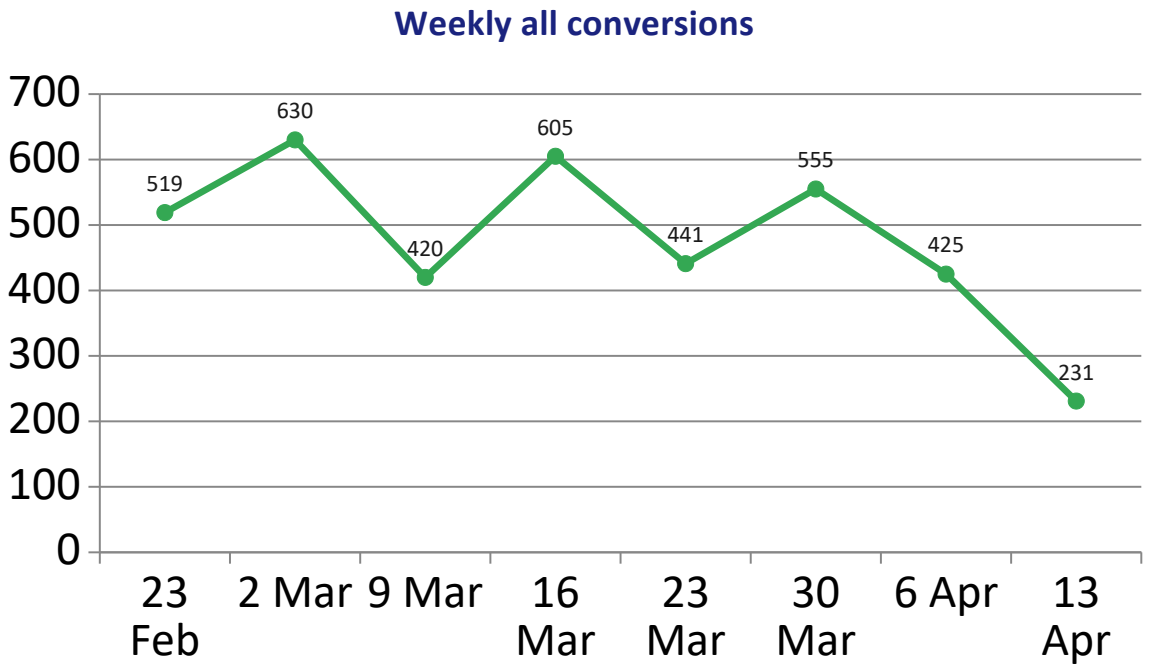
Campaign	Spend	Dengro Leads	Spend per Lead
Performance Max	£5,960	78.5	£75.92
Dental Implants Intent	£2,222	6.5	£341.83
Brand	£280	2.0	£140.24
TOTAL	**£8,462**	**87**	**£97.27**

8-Week Context

23 February – 17 April 2026

Account trajectory into Week 1. The engagement began 14 April (Week 8 on these charts).





Key Finding

Spend is down 52% vs 8-week peak as wasted impressions are removed at auction source. Conversion volume fell proportionally during structural disruption — efficiency (cost per lead) is the metric to watch from Week 3 onward, once the rebuild stabilises.

Client Clarifications & Actions

Giulio's replies — Fri 17 April 16:47

Giulio confirmed	Action taken / scheduled
Consultation: Free + £25 booking deposit	Update ad copy to "Free Consultation (£25 booking deposit)" — W2 Mon
"25+ years expertise" = team-wide across dental field	Keep as-is
"99.12% success rate" — estimate, not tracked	Remove from all ads — W2 Tue
"Save 60%" — estimate, no source	Remove — W2 Tue
"Top 10 Implant Provider in Europe" — self-claim, not an award	Reword as a factual descriptor
"Best Implant Clinic 2024" — clinic was a finalist	Reword to "2024 Finalist"
Lead → Booking: 13% · Booking → Treatment: 35%	Use in CPA / cost-per-booking modelling
~10,000 patients · 20,000+ implants placed	Replace outdated "2,500+ patients" claim with verified figures
Advertising focus: dental implants only (single + double arches)	Scope confirmed — cosmetic / general deferred

Week 2 Plan

20 – 24 April 2026

Day	Focus	Expected output
Mon 20 Apr	**Conversion Tracking Audit**	End-to-end verification on all Search campaign landing pages. Confirmation that Lead / Booking / Purchase fire reliably — the gate to all CPA analysis going forward.
Tue 21 Apr	**Claim Corrections + Ad Strength**	Remove "99.12%" and "Save 60%" from all ads. Reword Top 10 / Best Clinic claims per Giulio's replies. AG22-25 Ad Strength audit once Google clears Pending. Second pass on AG1-21.
Wed 22 Apr	**PMax Rebuild**	New asset groups with policy-safe copy aligned to Giulio's verified claims. Target: clear the "asset groups limited by policy" flag that has restricted reach since engagement started.
Thu 23 Apr	**Ad Extensions**	Sitelinks, callouts, and structured snippets deployed across all 3 live campaigns. First time the account has had a complete extensions suite.
Fri 24 Apr	**Week 2 Performance Review + Report**	7-day comparison vs Week 1. Signal emerging on Brand (mature) and PMax (settling). DII still in learning but trajectory visible. Week 2 report delivered EoD.

Questions?

Happy to walk through any section of this report or align on Week 2 priorities over a call.
