Data: 2025 (full year) + 2026 (Q1, Jan–Apr)

Non-Brand CPA Trend

£46 → £64

+40% increase year-on-year while spend nearly doubled

1,511
Ghost Conversions (KMG)

47
Total Campaigns

6.4
Avg QS (Weighted)

Executive Summary

2025 + 2026

£46→£64
Non-Brand CPA (+40%)

1,511
Ghost Conversions (KMG Legacy)

90%
Ads Rated Poor or Average

6.4/10
Weighted Avg Quality Score

Key Issues Identified

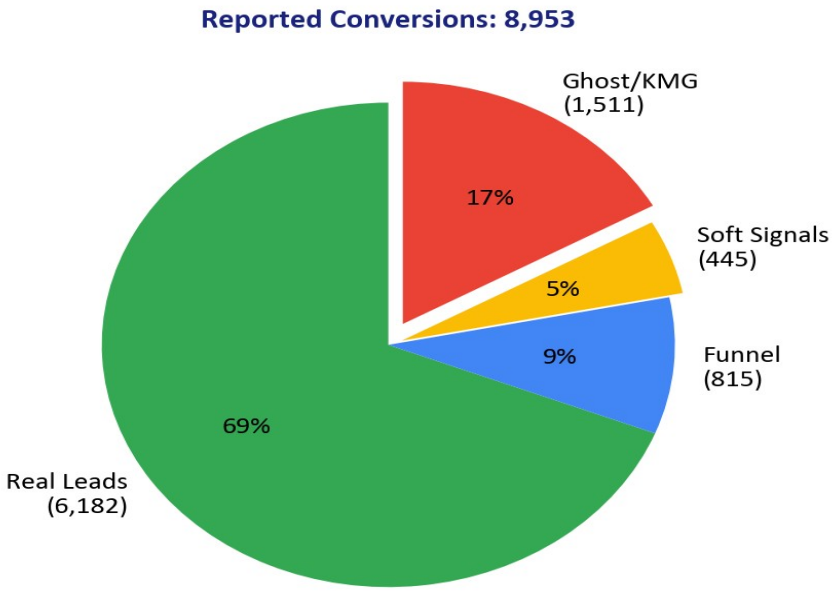
- 1,511 ghost conversions from legacy KMG landing pages are inflating reported performance. Giulio confirmed these should be ignored, but they're still set as Primary conversions feeding the bidding algorithm.
- Non-brand CPA has risen 40% year-on-year (£46 > £64) while monthly spend nearly doubled from £22K to £58K.
- Dengro Offline Leads (4,663) may include non-ad-sourced leads, further inflating Google Ads attribution. Pending verification.
- 90% of ads are rated Poor or Average strength. The main Search campaign (74,024 spend) has Poor-rated ads.
- Ad relevance is Below Average on 71% of scored keywords. Expected CTR is Below Average on 63%. These are the primary Quality Score drivers.

The core issue: the account is scaling spend aggressively but the foundations (conversion tracking, ad quality, keyword Quality Scores) haven't kept pace. Higher spend on weak foundations = rising CPA.

Conversion Tracking Audit

Critical Issue

1,511 ghost conversions + 445 soft signals are inflating reported performance



Conversion Classification

Category	Conversions	% of Total	Status
Real Leads (forms, calls, quiz)	6,182	69%	Legitimate
Funnel (Dengro bookings + purchases)	815	9%	Legitimate (downstream)
Soft Signals (clicks, not actions)	445	5%	Should be Secondary
Ghost (KMG legacy — confirmed ignore)	1,511	17%	Should be removed

Giulio Confirmed

- KMG OLD LP actions: "data that have been preserved but target old lp", confirmed ghost data.
- Dengro Offline Lead: Lead from CRM.
- Dengro Offline Booking/Purchase: Booked/completed patient.
- Every booking has an arbitrary £300 value.

Impact on CPA

- Reported CPA: £49 (using all 8,953 conversions)
- Real leads CPA: £71 (excluding ghost + soft signals)
- Leads + funnel CPA: £63 (including bookings)

The bidding algorithm is optimising toward 8,953 events, including 1,511 that don't exist and 445 that aren't real actions.
This is why CPA appears lower than it actually is.

The ROAS Puzzle

Bid Strategy

Target ROAS bidding is based on arbitrary £300 booking values - not real revenue

Current Bid Strategy Setup

Campaign	Bid Strategy	Target ROAS	2026 CPA
Dental Implants — PMax	Max Conv Value (tROAS)	30%	£52
Dental Implants Intent	Max Conv Value (tROAS)	60%	£94
Brand	Max Conv Value (tROAS)	10%	£18

The Dengro Pipeline

- Dengro Offline Lead: 4,663 (all CRM leads — may include non-ad sources)
- Dengro Offline Booking: 621 (£300 arbitrary value each = £70,910)
- Dengro Offline Purchase: 194 (completed treatment = £73,106)

- Lead → Booking conversion rate: 13.3% (621/4,663)
- Booking → Purchase conversion rate: 31.2% (194/621)

Why This Is a Problem

The algorithm is told to maximise conversion VALUE, not conversion VOLUME.
With £300 arbitrary booking values, a 30% ROAS target means the algorithm wants £300 in value for every £1,000 spent. i.e. one booking per £1,000 spend.

But only 621 of 8,953 reported conversions are actual bookings.
The algorithm is chasing a small pool of high-value events while spending broadly.
This explains why PMax CPA rose from £26 to £52, because it's optimising for bookings, not leads, but the booking signal is sparse and unreliable with an arbitrary value.

Recommendation

Option A: Switch to Maximise Conversions with Target CPA.
Optimise for LEAD VOLUME at a controllable cost per lead.
This gives direct control over acquisition cost.

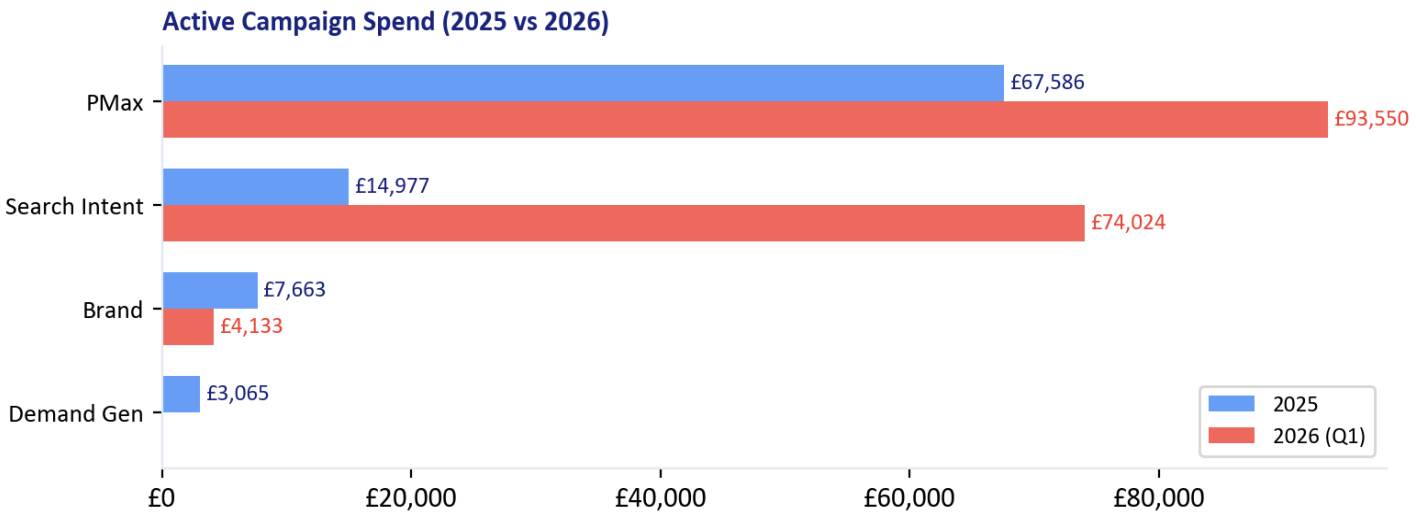
Option B: Keep Target ROAS but replace the £300 arbitrary value with actual treatment revenue from Dengro.
If a booking for a single implant is worth £1,695 and a Vivo Bridge is worth £15,990, the algorithm can intelligently bid more for high-value treatments.

Either option is better than the current setup.

Account Structure

Structure

47 campaigns, 4 active - a legacy of multiple agencies and strategy changes



Currently Active (4 Campaigns)

Campaign	2025 CPA	2026 CPA	Change
PMax	£26	£52	+100%
Search Intent	£61	£94	+54%
Brand	£17	£18	Stable
Demand Gen	£180	—	Not serving

The 43 Paused Campaigns

Legacy Agencies

KMG (Kau Media Group): 6 campaigns, L87K spend
Multiple naming conventions and strategies
KMG conversion actions still firing as Primary

Historical Experiments

Device-split campaigns ('Mobile Only', 'Desktop')
Geo-split campaigns ('London', 'Geo')
Service campaigns (Invisalign, Veneers, Full Arch, Teeth In A Day)
Dating back to 2022

Recommendation

Remove all campaigns paused 6+ months with no active learnings.
This doesn't affect performance but makes the account manageable.
Clean structure is essential for multi-clinic expansion.

Ad Group Structure (2026)

2025 vs 2026

Search Intent campaign: 8 ad groups with wide CPA variation

Campaign	Ad Group	Spend	Conv	CPA	CVR
Dental Implants Intent	Dental Implants	£26,644	240	£111	8.9%
Dental Implants Intent	Implants Cost	£17,280	217	£80	7.3%
Dental Implants Intent	All on 4 Google	£10,210	96	£106	6.6%
Dental Implants Intent	All on 4	£6,283	49	£128	5.5%
Dental Implants Intent	Implants Cost Google	£4,588	46	£100	6.2%
Dental Implants Intent	Dental Implants Google	£4,499	41	£111	6.4%
Brand	Dental by Design	£4,133	230	£18	13.6%
Invisalign - Geo	Invisalign London	£3,679	81	£45	10.1%
Dental Implants Intent	Financing	£2,890	86	£34	24.7%
Dental Implants Intent	Dental Implants Hammersmith	£1,631	12	£142	3.6%
Invisalign - Geo	Invisalign Hammersmith	£81	2	£54	10.7%

Key Finding

The 'Dental Implants' ad group (£26.6K) runs at £111 CPA, the worst in the account.
Meanwhile 'Financing' (£2.9K) runs at £34 CPA with 24.7% CVR.
Budget is flowing to the least efficient ad groups.

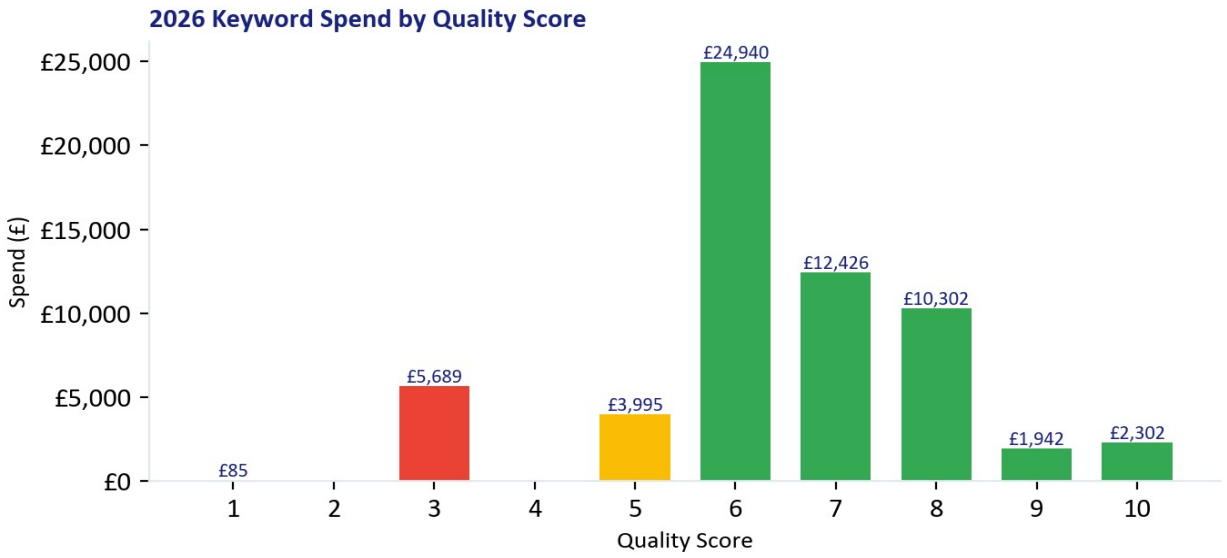
Recommendation

The 'Financing' and 'Implants Cost' ad groups convert better because they match cost-conscious search intent with the right landing page.
Restructure ad groups around patient intent, not just keyword categories.

Quality Score Analysis

2025 vs 2026

Weighted average QS: 6.9 (2025) → 6.4 (2026) — declining



QS Components (2025 vs 2026)

Component	2025 Below	2025 Above	2026 Below	2026 Above
Ad Relevance	57 (74%)	12 (16%)	58 (71%)	14 (17%)
Expected CTR	51 (66%)	7 (9%)	52 (63%)	8 (10%)
Landing Page	3 (4%)	55 (71%)	3 (4%)	58 (71%)

Worst QS Keywords (QS 1-3) — 2026 Spend

Keyword	QS	Spend	CPA	Ad Rel.
[surgical dental implants]	3	£3,909	£112	Below average
[cost to replace all teeth]	3	£559	£74	Below average
[dentist with payment plans near me	3	£311	£27	Below average
[permanent bridge teeth]	3	£244	£214	Below average
[molar replacement cost]	3	£159	£40	Below average

Consistent Pattern Both Years

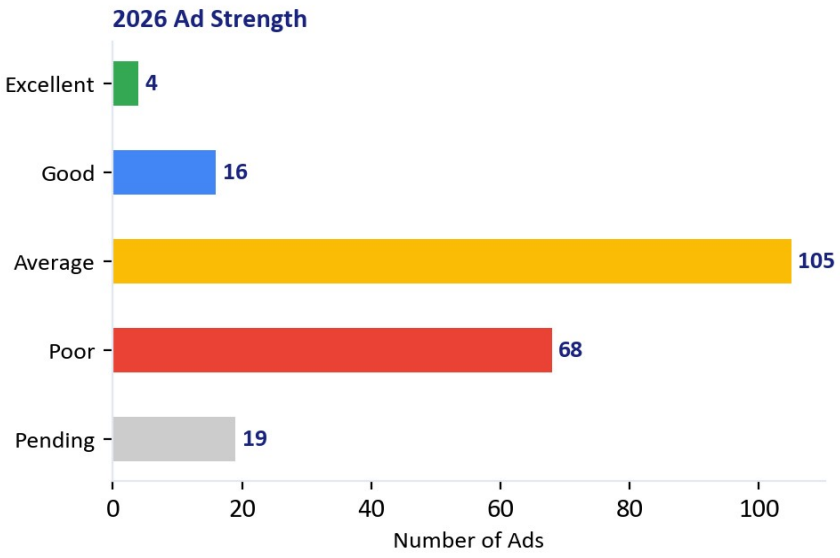
Landing pages: strong (71% Above Average both years).
Ad relevance: weak (74% Below 2025, 71% Below 2026).
The ads don't match what people search for.

Note: In 2025, most low-QS keywords (1-5) had zero spend because the Search Intent campaign was only active late in the year. The QS issues have emerged as this campaign scaled in 2026.

Ad Copy Audit

Current State

90% of ads rated Poor or Average — the primary driver of low Quality Scores



Current Ad Strength (All Ads in Account)

Strength	Count	% of Total	Impact
Excellent	4	2%	Keep — best performers
Good	16	8%	Keep — performing well
Average	105	50%	Rewrite — opportunity to improve
Poor	68	32%	Rewrite urgently — dragging QS down
Pending	19	9%	New ads — monitor

Critical Finding

The main Search Intent campaign (£15K spend in 2025, £74K in 2026) has Poor-rated ads. This directly causes Below Average ad relevance on 71% of keywords.
Poor ads = low QS = higher CPCs = higher CPA. This has been the case across both years.

Spend on Poor/Average Ads

2025: £265,869 total spend — same ads running throughout
2026: £175,467 total spend — same ads, but at nearly double the budget

The ads haven't been rewritten as spend has scaled. The same Poor-rated ads that ran at £15K/month are now running at £58K/month.

Recommendation:

- **Rewrite all Poor and Average ads.**
- **Match headlines to search intent.**
- **Test 2-3 RSA variants per ad group.**

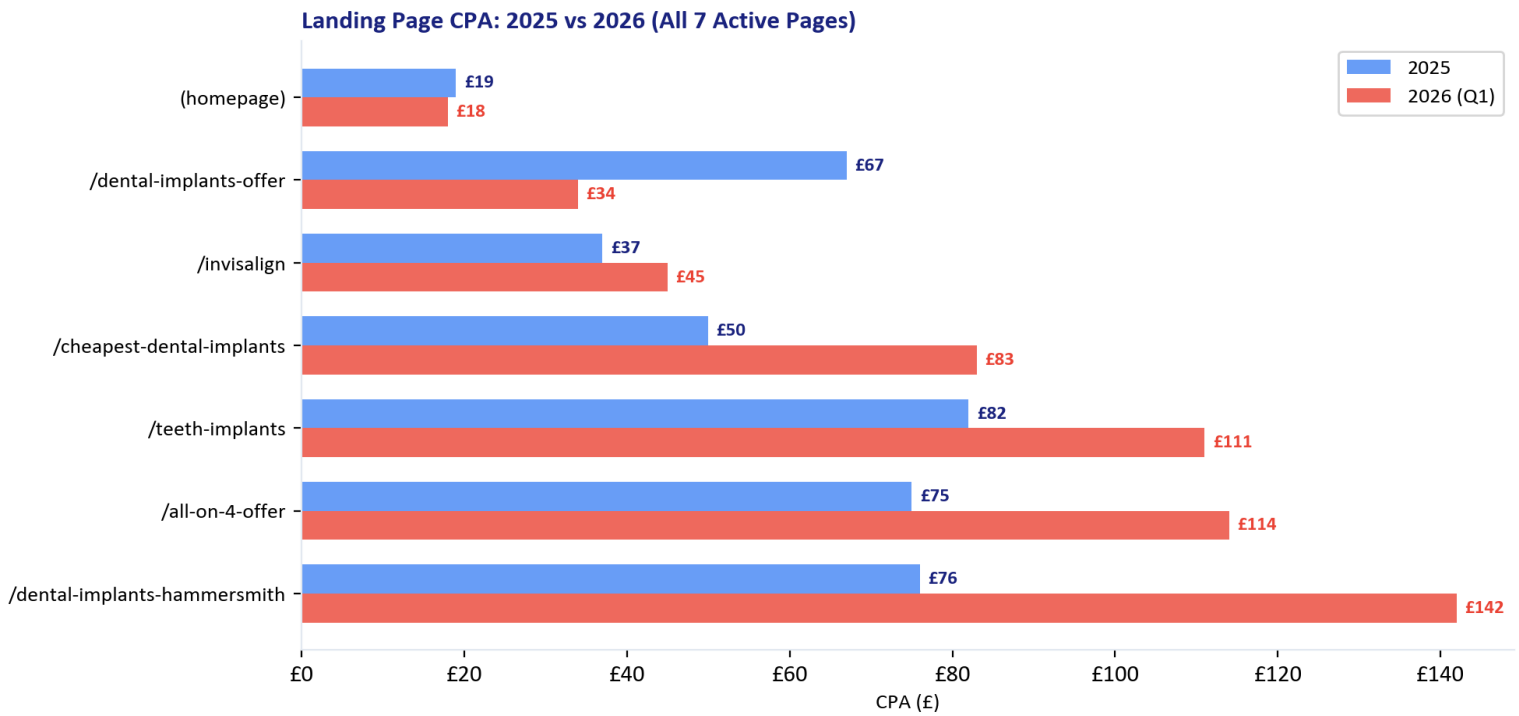
This is the #1 lever for reducing CPA.

Better ads = higher QS = lower CPCs = more patients for the same budget.

Landing Page Performance

2025 vs 2026

CPA varies 7x+ across landing pages — and has worsened year-on-year on the top pages



Best Performer

/dental-implants-offer:

- 2025: £67 CPA, 6.8% CVR
- 2026: £34 CPA, 24.7% CVR

Improved as Financing ad group sends cost-conscious traffic here.

Worst Performer

/teeth-implants (highest spend):

- 2025: £82 CPA, 9.3% CVR
- 2026: £111 CPA, 8.5% CVR

CPA risen 35% YoY despite receiving £31K in 2026, the most of any page.

The Good News

QS data confirms landing pages score well (71% Above Average both years).
The pages aren't the problem — it's which traffic reaches which page.

Recommendation:
Route traffic to the best-converting pages.
/dental-implants-offer at £34 CPA should receive more traffic than /teeth-implants at £111.

Change History

Account Management

2,543 changes — 89% by one person, 24 by auto-apply

Who Manages the Account

User	Changes	Role
giulio.zanchetta@majestico.it	2,264 (89%)	In-house (Giulio)
taranjeet@kaumediagroup.com	166 (7%)	Previous agency (KMG)
nav@kaumediagroup.com	40	Previous agency (KMG)
Recommendations Auto-Apply	24	Google system
junad@kaumediagroup.com	22	Previous agency (KMG)
sarahm@kaumediagroup.com	14	Previous agency (KMG)
Google Ads System	4	Google system

What's Being Changed

Category	Count	Assessment
Keywords added/paused	1,315	Highest activity — frequent keyword management
Campaign changes	715	Many campaigns created and paused over time
Targeting	420	Location, device, audience changes
Ad changes	418	Ad creation and modification
Bid strategy	223	Multiple strategy changes over time
Budget changes	198	Frequent budget adjustments
Assets (PMax)	197	PMax asset group management
Negative keywords	182	Negative keyword additions

Key Observation

Giulio is doing the work of a full-time PPC specialist alongside his other responsibilities.
2,264 changes shows significant effort and engagement with the account.
The issue isn't lack of activity, it's that the foundations (conversion tracking, ad quality, negative keywords) need specialist attention that goes beyond day-to-day management.

Auto-Apply: 24 Changes

Google auto-removed keywords including [low cost dental implants], [cheapest dental implants], [all on 6 dental implants], [implant teeth cost], and [replace teeth].

Several of these are high-intent keywords that should be in the account.
Auto-apply is removing keywords without human oversight, I recommend disabling.

Issues Summary — Prioritised

12 Issues Identified

Critical (Fix Immediately)

1. Ghost conversions (KMG)

1,511 phantom conversions misleading the bidding algorithm. Confirmed by Giulio as legacy data.

2. ROAS on arbitrary £300 values

Algorithm chasing sparse booking signals instead of optimising for lead volume.

3. 90% of ads Poor/Average

Directly causing Below Average ad relevance on 71% of keywords. Same ads, never rewritten.

4. Dengro Lead attribution

May include non-ad leads, inflating Google Ads credit. Pending verification.

Important (Fix in 30 Days)

5. No device bid adjustments

Desktop £67→£92 vs mobile £42→£56. Gap widening.

6. No ad schedule adjustments

7am: £56→£74 CPA (worst both years). No scheduling exists.

7. No day-of-week adjustments

Sunday: £45→£68 CPA, 4.1% CVR (lowest). Emerging problem.

8. 47 campaigns (43 paused)

Structural confusion from legacy agencies. Remove all paused 6+ months.

9. Auto-apply enabled

24 keyword removals without human review. Disable immediately.

Monitor (Ongoing)

10. 784 broad match negatives

Account-level lists may block legitimate traffic. Full audit needed. Replace with phrase/exact.

11. Landing page CPA variance

7x+ range (£18–£142 in 2026). Optimise traffic routing to best-converting pages.

12. Quality Score declining

Weighted avg: 6.9→6.4. Ad relevance is the driver. Ad rewrites will address this.

The 4 Critical issues affect every conversion and every pound spent. Fixing them is the foundation for everything else.

What's Next

These issues become the foundation for Report 3

1. **Remove KMG ghost conversion actions**
2. **Move soft signals to Secondary**
3. **Verify Dengro Offline Lead attribution**
4. **Rewrite all Poor/Average ads**
5. **Evaluate bid strategy: tCPA vs tROAS**
6. **Clean up 43 paused campaigns**
